

SYSTEM PROPOSAL & INSTITUTIONAL BUDGET

Financial Transparency & Student Academic Portal

PROJECT PROPONENT: College of Engineering LGU, Cor Jesu College

SUBMITTED TO: Office of the President / Academic Administration

DATE OF SUBMISSION: September 24, 2026 | Ref: SP-2026-COE-001

PROPOSED BUDGET: ₱18,500.00 PHP (Turnkey Implementation)

1. Executive Summary & Project Rationale

This proposal presents a turnkey deployment plan for the institutional adoption of the Financial Transparency and Student Academic Portal. Developed and validated within the College of Engineering Local Government Unit (COE-LGU) of Cor Jesu College, the platform resolves two critical administrative friction points: manual financial record-keeping and fragmented student academic progress verification.

Financial tracking relying on disconnected spreadsheets and paper receipts suffers from delayed liquidation reporting, lack of real-time balance visibility, and high audit overhead. Concurrently, academic evaluation (such as load approval, prerequisite validation, and standing verification) requires manual cross-referencing across separate rosters and forms. The proposed web-based system unifies both financial ledger management and academic prospectus verification into a single, secure, role-restricted platform.

2. Core System Architecture & Scope

The application is built as a client-server web system leveraging Supabase (PostgreSQL with Row-Level Security) and standard web technologies. It requires zero client installation and functions seamlessly across desktop browsers, mobile devices (Progressive Web App), and optional native desktop clients.

Functional Domain	Key Capabilities & Features	Target Users
1. Financial Ledger & Transparency	Double-entry transaction ledger with compulsory receipt uploads, per-activity budget envelopes, real-time overdraft validation, automated PDF/Excel liquidation report generation, and public disclosure summary.	Officers, Cashiers, Governor, Admin
2. Academic Records & Load Verification	Program prospectus structure, prerequisite and co-requisite validation, student load submission & Program Head approval workflow, credit-unit tracker, automated standing transcripts, and student roster integration.	Students, Program Heads, Dean
3. Student Services & Public Verification	Targeted in-app & email notifications, structured student feedback facility, institutional announcements, and verifiable digital Curriculum Vitae (CV) builder with public token validation.	Students, External Verifiers
4. Executive Governance & Security	8-tier Role-Based Access Control (RBAC), append-only immutable audit logging, institutional email domain lock (@cjc.edu.ph), rate limiting, row-level security policies, and weekly automated backups.	System Administrator, Audit Officers

3. Security, Privacy & Data Compliance

Security and privacy controls are embedded directly into the database architecture, complying strictly with the Data Privacy Act of 2012 (RA 10173):

- **Row-Level Security (RLS):** Database policies ensure students view only their own records, while officers access assigned organizational domains.
- **Append-Only Audit Logging:** Financial corrections or role alterations log actor ID, timestamp, and mandatory justification.
- **Domain-Locked Registration:** Registration is restricted to valid institutional email addresses (@cjc.edu.ph) via database triggers.
- **Encrypted Private Receipts:** Receipt images and document attachments are stored in private storage buckets served via authenticated tokens.

4. Phased Implementation Roadmap (4-Week Rollout)

To guarantee an orderly rollout without disrupting routine academic operations, deployment is executed in four structured phases across four weeks:

Phase & Timeline	Key Implementation Activities	Primary Milestone
Phase 1: Week 1 Discovery & Config	Initial discovery, institution branding setup (logos, letterhead banners), database schema migration, email domain locking, and role permission mapping.	Configured Environment
Phase 2: Week 2 Data & Prospectus	Encoding degree program prospectus structures, prerequisite rules, student roster CSV import, and initial general fund baseline setup.	Populated Core Database
Phase 3: Week 3 Pilot & Training	Conducting pilot load evaluation with one department, user acceptance testing (UAT), training workshops for Program Heads, Cashiers, and Officers.	Signed UAT & Readiness
Phase 4: Week 4 Go-Live & Support	Full institutional production deployment, administrator console handover, SSL verification, automated backup activation, and 1-year support launch.	Production Go-Live

5. Institutional Budget Proposal (₱18,500.00 Turnkey Package)

Because the core system architecture is fully pre-built and operational, the adopting institution incurs ZERO software custom-development costs. The itemized budget below represents a turnkey deployment package spanning configuration, database migration, training, and a 1-year maintenance SLA.

Budget Component	Scope of Deliverables & Services Included	Cost (PHP)
1. System Branding & Configuration	Customization of institutional branding (school logo, seal, official letterhead banners), email domain lock setup (@cjc.edu.ph), and SMTP mail server integration.	₱4,500.00
2. Database Setup & Roster Migration	Supabase PostgreSQL cloud instance provisioning, database schema migration execution (32 migration files), student roster CSV import, and curriculum prospectus encoding.	₱5,000.00
3. Institutional Training & Handover	Role-based training workshops for Program Heads, Cashiers, Officers, and System Administrators. Provision of complete documentation manuals and administrator guides.	₱4,000.00
4. Security Hardening & 1-Yr Support	SSL security configuration, automated weekly encrypted backup workflows, rate-limiting rules, priority bug fixes, and 12-month technical support agreement.	₱5,000.00
TOTAL INVESTMENT	Complete, turnkey institutional deployment including configuration, training, documentation, and 1-year dedicated technical support. Zero recurring platform fees.	₱18,500.00

6. Strategic Institutional Benefits & Expected Impact

The adoption of the system provides measurable, high-impact improvements across administrative governance, financial accountability, and academic operations:

- **Immediate Liquidation Readiness:** Generates official PDF and Excel liquidation reports directly from recorded transaction ledgers, reducing report assembly time by over 90% and eliminating missing receipt bottlenecks.
- **Zero Manual Balance Discrepancies:** Real-time ledger balance validation prevents account overdrafts and maintains continuous transparency over organizational funds.
- **Automated Load & Prerequisite Evaluation:** Program Heads evaluate submitted loads against automated prerequisite rules, preventing invalid course sequence enrollments and manual transcript auditing.
- **Uncompromising Governance Audit Trail:** Append-only audit logs record every financial entry modification or administrative change, ensuring complete governance peace of mind and effortless internal audit preparation.
- **Omnichannel Student & Officer Access:** Students and faculty access real-time financial ledgers and academic standing from web browsers, installed mobile PWA apps, or native desktop applications.

7. Governance, Data Ownership & Technical Support SLA

Upon successful deployment, the adopting institution assumes full, unencumbered ownership of all database records, user credentials, and financial documentation. System database backups are encrypted weekly and stored within institutional storage repositories. A formal Data Processing Agreement (DPA) will be executed alongside system handover to solidify data compliance.

The turnkey package includes a 12-Month Maintenance & Support SLA covering system updates, SSL maintenance, database optimizations, and priority technical assistance for System Administrators.

8. Recommendation & Authorization Sign-Off

We respectfully request formal authorization to proceed with Phase 1 (Discovery & Institutional Configuration) under the proposed turnkey budget of ₱18,500.00 PHP.
